

Effective combinational treatment of chronic pain in individual patients by an innovative quantitative systems pharmacology (QSP) pain relief approach

WHY

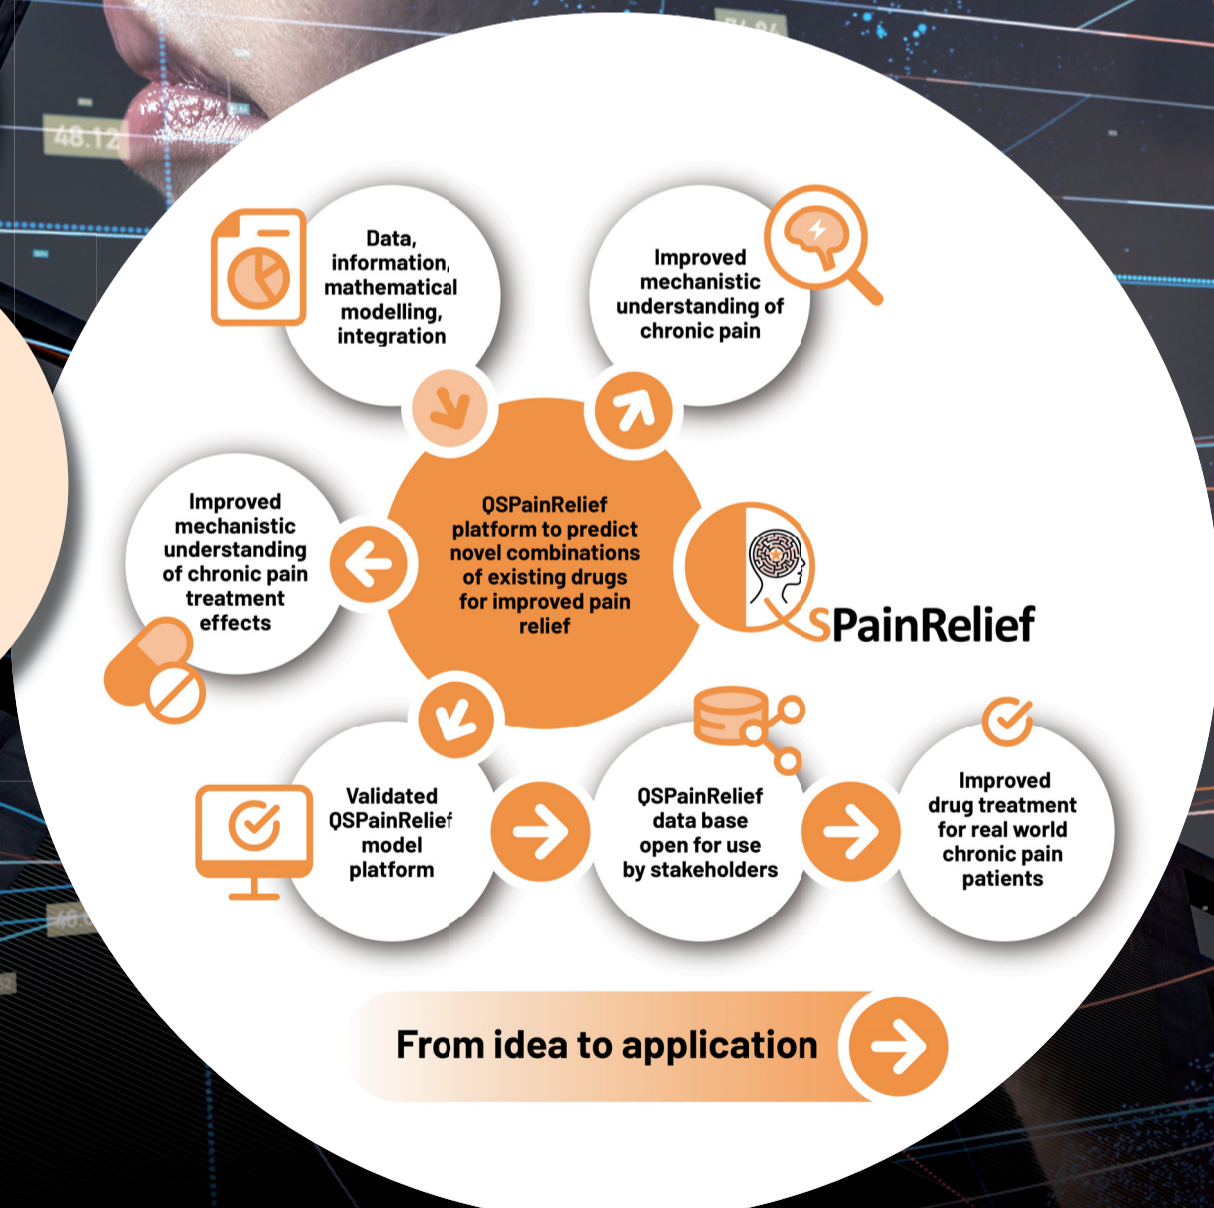

Currently, 60% of chronic pain patients do not experience proper pain relief upon treatment.

WHAT

We develop novel, personalised, and effective combinational treatments of existing medications.

HOW

in silico data integration and model development
 → preclinical validation
 → clinical validation
 (in healthy volunteers and real-world pain patients)

QSPainRelief is an international research project that brings together 10 institutions from 5 European countries and the USA.
